3. Implementation and unit testing

During this stage, the software design is realized as a set of programa or program units.

programmers write code to implement the system as described in design document.

During implementation, programmers also perform unit tests.

Unit testing involves verifying that each unit meets its specification.

4. flntegration and system testing

The individual program units or programs are integrated and tested as a plete system to ensure that the software requirements have been met. /

+ After testing, the software system is delivered to the customer.

5. Operation and maintenance

Normally (although not necessarily) this is the longest life-cycle phase. |,

The system is installed and put into practical use.

Maintenance involves correcting errors which were not discovered in earlier stages of the life cycle, improving the implementation of system units and enhancing jthe system's services as new requirements are discovered.
